

PROJECT MANAGEMENT SERVICES

Successful project management of advanced control system projects demands the ability to manage the delivery of complex technical solutions within the often conflicting requirements of time, cost and quality. **PROVECTA** is able to provide specialist project managers with demonstrated experience in successfully managing the whole range of control system projects – from major Distributed Control System and SCADA system installation/upgrades, to specialised critical application and smaller PLC projects. All of **PROVECTA's** Project Managers have come from a background in the hands on implementation and commissioning of control systems which we believe is an important asset of any successful control system Project Manager.

PROVECTA is able to offer the following project management services;

- Specification Preparation
- Tender Evaluation Criteria Development
- Tender Analysis
- Vendor Selection
- Owners Engineer
- Contract Management
- Cost Management
- QA documentation
- Implementation Strategies
- Project Scheduling
- Installation Management & Supervision
- Site Commissioning Managers

The use of **PROVECTA** project management capabilities assures you will receive independent professional services committed to managing the project with your interests at heart – leading to a quality project delivered on time with significantly reduced project life cycle costs.

Please contact Mr. Andrew Oates on the contact details below to discuss further where **PROVECTA** can add value to your next control system project.
