

PLANT INFORMATION TECHNOLOGY SECURITY SERVICES

In today's environment, maintaining the security of your plant IT and process control systems it is critical to ensure your plant is protected against unintended operation - whether this be through inadvertent operation errors or external attacks - either physical or electronic.

The increased integration of process control and information systems with corporate networks and use of standard network technologies has provided many benefits, however it has also exposed these systems to the external world, and increased the potential of attack or hacking.

PROVECTA provides a range of services to assist in managing the risks associated with Plant IT systems:

- Process Control Equipment IT Security Audits reviews
- Physical Security Reviews
- Configuration Reviews
- Procedural and Operational Controls Review
- Risk Assessments
- Security Implementation
- Disaster Recovery Plan Development and Review

Why **PROVECTA**?

While plant control and IT systems utilise many of the same technologies as corporate IT systems, they have many unique features and requirements. It is essential to use a service provider who is familiar with both the plant hardware and plant operations.

PROVECTA has highly skilled professional staff experienced in all aspects of process control equipment, including the IT issues.

Provecta can provide the complete range of services to investigate, assess, and implement corrective action to improve the security of your plants IT systems. We can work in conjunction with your corporate IT security service provider or risk management consultant, to develop an overall plan for the entire organisation.

Please contact Mr. Ron Mastus to discuss where **PROVECTA** can assist in improving the security of your Plant IT systems.
