

COMPANY PROFILE

Provecta Process Automation Pty Ltd is an Australian owned electrical engineering consultancy company specialising in the fields of industrial automation and control systems, with an emphasis in power generation and related industries. The company's head office is located in Sydney.

Our highly qualified engineers, project managers, and support staff hold significant expertise in the provision of process control solutions, electrical engineering services, and systems integration management.

We strive to be recognised by our customers as the preferred supplier of specialised automation/control technology, electrical engineering and project management services. We achieve this recognition by providing customer focussed engineering solutions committed to meeting every customer's expectations for value, responsiveness and quality.

Our diverse portfolio of consulting and contracting services includes:

- Project development phase engineering and investigation services (including concept development, feasibility studies, remnant life studies, project and life cycle cost estimation).
- Expert and technical advisory engineering services (including design investigations, specification preparation, tender analysis, contract management, and acting as Owner's Engineer).
- Control and instrumentation design and implementation engineering (design management, system architecture development, procurement, implementation management, configuration, programming, and commissioning).
- On site services (control system benchmarking, testing, fault finding, commissioning, tuning, training, installation management and supervision).
- Control system and associated computer network/equipment maintenance and security services.
- Operations support and asset management services
- Project management services.

We have particular expertise in the provision of advice and engineering services in the following technology areas:

- Analog and digital control systems (modulating and sequence)
- Process Protection systems such as Burner Management Systems
- Power Generation Coordinated Control Systems
- Data Acquisition and Digital Systems maintenance and support
- Power Plant Simulators
- SCADA and PCS systems and applications
- LAN and WAN communications and network systems
- Human Machine Interfaces (graphical user interfaces)
- Field instrumentation (process monitoring transmitters/transducers)
- Field actuators/controllers
- Power supplies and electrical distribution systems
- IT security audits and advice for control systems and associated computer equipment

Whilst our design and implementation experience covers a broad range of vendors' systems and hardware, **PROVECTA** is not aligned to any specific control system vendor and as such, we are able to provide independent and objective advice to provide the best solution to resolve any process control problems.

For more information on how **PROVECTA** can assist your business achieve its objectives, please contact:
